A graduate of Birmingham and Newcastle Universities, he has worked in Turkey for over twenty years and recently completed a major research project on the Water Supply of Byzantine Constantinople and the city's hinterland fortification system 'the Anastasian Wall'.

Professor Jim Crow, Professor of Classical Archaeology, talks about his research into the water supply of Byzantine Constantinople.

One of the greatest achievements of Roman hydraulic engineering, the water supply of Constantinople included the longest known aqueduct of stones from the ancient world and the most complex system.
